DEVELOP A PYTHON SCRIPT TO PUBLISH AND SUBSCRIBE TO IBM IOT PLATFORM

| Date | 19 Nov 2022 |
|--------------|--------------------------------------|
| Team ID | PNT2022TMID11540 |
| Project Name | IOT enabled smart farmer application |

PYTHON CODE FOR HUMDITY, SOIL MOISTURE AND TEMPERATURE:

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random
#Provide your IBM Watson Device Credentials
organization = "z8hv0n"
deviceType = "Sprint1"
deviceId = "12345678"
authMethod = "token"
authToken = "12345678"
# Initialize GPIO
def myCommandCallback(cmd):
  print("Command received: %s" % cmd.data['command'])
  status=cmd.data['command']
  if status=="motoron":
    print ("led is on")
  elif status == "motoroff":
    print("led is off")
  else:
    print ("please send proper command")
  #print(cmd)
try:
       deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-
method": authMethod, "auth-token": authToken}
       deviceCli = ibmiotf.device.Client(deviceOptions)
       #.....
except Exception as e:
       print("Caught exception connecting device: %s" % str(e))
       sys.exit()
```

Connect and send a datapoint "hello" with value "world" into the cloud as an event of type

```
"greeting" 10 times
deviceCli.connect()
while True:
    #Get Sensor Data from DHT11
    temp=random.randint(0,100)
    Hum=random.randint(0,100)
    data = { 'temp' : temp, 'Hum': Hum }
    #print data
    def myOnPublishCallback():
      print ("Published Temperature = %s C" % temp, "Hum = %s %%" % Hum, "to IBM
Watson")
    success = deviceCli.publishEvent("IoTSensor", "json", data, qos=0,
on publish=myOnPublishCallback)
    if not success:
      print("Not connected to IoTF")
    time.sleep(1)
    deviceCli.commandCallback = myCommandCallback
# Disconnect the device and application from the cloud
deviceCli.disconnect()
